

# Discussion Now

*A place where fresh content drops every 30 minutes and strangers become real conversation partners.*

---

Like a living room where the conversation is always just starting.

# What is Discussion Now?

*"A curated prompt drops every 30 minutes. You join a live room. You talk. You leave smarter."*

## Curated Content

Art, music, video, essays — hand-picked to spark debate and reflection.

## 30-Minute Sessions

Each room has a natural end time. Join now or catch the next one in minutes.

## Real People, Real Talk

AI assists matching but humans do the talking. Conversation — not content consumption.

# The user journey, step by step.

## Rate & score

Talk Score + post-session  
connection offers

# The things we're proud of.

## **The 30-min format just works**

People love that it ends. No infinite scroll anxiety. The countdown creates urgency and focus that regular chat apps completely lack.

## **Matching creates real chemistry**

Pre-entry mood + goal selection means you rarely land in a room that feels wrong. Users consistently report 'better conversations than Reddit or Twitter'.

## **Talk Score changes behaviour**

Gamifying quality — not virality — attracts a completely different type of user. Early testers self-select for depth, not clout.

## **AI as silent co-host**

AI doesn't dominate — it summarises, connects dots, and nudges when discussion stalls. Users say it feels like a 'really good moderator' not a chatbot.

## **Retention loop is natural**

"Next drop in 4 minutes" is genuinely compelling. Early users come back not because of notifications — but because the next conversation is always close.

## **Low barrier, high signal**

No profile required to start. Drop in, say something real, leave. The simplicity keeps quality high and friction low.

# The hard things we haven't solved yet.

## Cold start problem

Who talks in an empty room? We need enough users in the same timezone to make sessions feel alive. First 10K users are existential.

→ Thinking: seeded AI participants + invite-only city launches

## Habit formation is hard

30-min sessions are great — but unpredictable schedules mean users need to remember to show up. Push notifications help but aren't magic.

→ Thinking: calendar integration + pre-registration for upcoming drops

## Content moderation at scale

Live chat is a liability. One bad actor in a room poisons the experience. Our current flag system is manual — doesn't scale.

→ Thinking: Trust score gating + pre-moderation AI layer

## Monetisation timing

Users love the free experience. We haven't tested willingness to pay yet. The premium tier is logical but unvalidated by real conversion data.

→ Thinking: freemium conversion experiments in Q3 2026

# How we make money.

## 01 Premium

\$9 – \$19 / month

Priority matching, unlimited sessions, custom profile, exclusive content rooms. The core upsell.

● *Unvalidated — logical but untested*

## 02 Sponsored Drops

\$5K – \$50K / campaign

Brands pay to sponsor a content drop. A film studio sponsors a film discussion. A label sponsors a music room. Native, not intrusive.

● *Strong early interest from 2 brands*

## 03 B2B Discussion Rooms

\$499 / month

Companies pay for private branded rooms — product feedback, team culture, customer communities. Recurring revenue.

● *1 pilot in discussion*

## 04 Insight Reports

Enterprise / custom

Anonymised sentiment + engagement data sold to publishers, media brands, educators. High margin if we reach scale.

● *Far-future, needs scale first*

# Here's what we're still figuring out.

*We'd rather show you where we're uncertain than pretend we have all the answers. These are the real questions we're sitting with — and where we'd value your perspective.*

## MARKET

### Is the TAM real — or are we a niche?

Honest: We believe the \$47B social audio + discussion market is real. But genuinely focused live discussion may be a much smaller slice of that. We don't know yet.

→ *We'd love a partner who's invested in this space before — or who can reality-check our assumptions.*

## TRACTION

### Do we have enough proof of concept?

Honest: We have a live working product and early user feedback that's encouraging. We don't have DAU numbers, conversion data, or a paid user yet. We know that.

→ *What's the minimum proof you need before conviction? We'd rather build toward your bar than guess.*

## THE ASK

### How much, and on what terms?

Honest: We're thinking \$1–2M seed to reach 10K DAU and validate one revenue stream. We're open on structure — this is a conversation, not a demand.

→ *We want investors who'll push back on our assumptions and help us think more clearly, not just write a check.*

# The best conversations don't happen by accident.

*We're building the room where they happen on purpose.*

---

Let's have a conversation about having better conversations.
